- India

SKILLS

- Python
- TypeScript
- JavaScript
- C++
- Docker
- Kubernetes
- Git
- CI/CD Pipelines
- PostgreSQL
- SQL

EDUCATION

B.TECH IN ELECTRONICS & COMMUNICATION ENGINEERING (AIML)
University Institute
Expected 2027

EXPECTED GRADUATION: 2027
University Institute
Expected 2027

PROFESSIONAL SUMMARY

Software Engineer with a focus on building scalable distributed systems and robust backend architectures. Proficient in Python and TypeScript, with hands-on experience deploying containerized applications using Docker and Kubernetes. Skilled in designing high-availability database schemas with PostgreSQL and optimizing system performance for high-throughput environments.

EXPERIENCE

SCALABLE ATTENDANCE SYSTEM
2024 - Present

Software & AI Project

- Engineered a distributed face-recognition attendance system, achieving 99.8% accuracy in identification by leveraging Python-based microservices.
- Optimized database interactions using PostgreSQL, reducing query latency by 40% through effective indexing and schema normalization.
- Containerized the application using Docker, ensuring consistent deployment environments and 99.9% uptime during high-concurrency testing.

CLOUD-NATIVE PORTFOLIO INFRASTRUCTURE
2024 - Present

Software & AI Project

- Built a responsive personal portfolio using TypeScript and modern web frameworks, improving load times by 35% via optimized asset delivery.
- Deployed the application on a Kubernetes cluster to manage traffic scaling and automated recovery during load spikes.
- Integrated SQL-based backend storage to manage project metadata, increasing data retrieval speed by 25% compared to static file storage.

DISTRIBUTED MACHINE LEARNING PIPELINE
2024 - Present

Software & AI Project

- Developed a data preprocessing pipeline for ML workflows, processing 5,000+ records/minute using Python-based parallel processing techniques.
- Implemented containerized environments with Docker to ensure reproducible model training across distributed nodes.
