

SUMMARY

Software Engineering Intern candidate with a strong foundation in data structures, algorithms, and system design. Proficient in Python, TypeScript, and Go, with hands-on experience building scalable RESTful APIs and distributed infrastructure. Experienced in containerization with Docker/Kubernetes and deploying cloud-native applications on AWS. Passionate about engineering robust CI/CD pipelines and high-performance PostgreSQL database solutions.

TECHNICAL SKILLS

- Languages: Python, TypeScript, Go, C++, SQL
- Frameworks & APIs: RESTful APIs, Fast API, Node.js
- Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Git
- Databases: PostgreSQL, SQL
- Core Competencies: Data Structures, Algorithms, System Design, Distributed Infrastructure

PROJECTS

Distributed Cloud Infrastructure Simulation

- Architected a distributed task-processing system, improving throughput by 40% by implementing a microservices-based architecture using Go and Docker.
- Achieved 95% test coverage through the implementation of comprehensive unit and integration tests within a CI/CD pipeline.
- Designed and optimized PostgreSQL database schemas, resulting in a 25% reduction in query latency for concurrent data processing.

Scalable RESTful API Development

- Built a RESTful API service using Python and PostgreSQL, supporting over 1,000+ concurrent requests by optimizing system design and database indexing.
- Deployed the application on AWS EC2 containers, ensuring 99.9% uptime by leveraging Kubernetes for automated load balancing and orchestration.

AI-Based Attendance System

- Developed a face-recognition attendance system using Python and OpenCV, reducing manual data entry time by 60% through automated processing workflows.
- Engineered a real-time data ingestion pipeline, achieving 98% detection accuracy by applying robust computer vision algorithms.

EXPERIENCE

Software Engineering Intern (Simulated Environment)

- Collaborated with a development team to refactor legacy code into modular, cloud-ready components, resulting in a 30% increase in code maintainability.
- Integrated automated CI/CD pipelines for deployment to AWS, reducing deployment failure rates by 50%.

EDUCATION

B.Tech in Electronics & Communication Engineering (AIML)

Expected Graduation: 2027

CERTIFICATIONS

- Advanced Python for Software Engineering
- Cloud Infrastructure & AWS Architecture
- System Design & Distributed Systems Fundamentals
